Chapter 2. Flow Control

[Next](#)

Recognize the effect of an exception arising at a specified point in a code fragment. Note that the exception may be a runtime exception, a checked exception, or an error.

Error

An Error is a subclass of Throwable that indicates serious problems that a reasonable application should not try to catch. Most such errors are abnormal conditions. The ThreadDeath error, though a "normal" condition, is also a subclass of Error because most applications should not try to catch it.

A method is not required to declare in its throws clause any subclasses of Error that might be thrown during the execution of the method but not caught, since these errors are abnormal conditions that should never occur.

```
java.lang.Object
  java.lang.Throwable
    java.lang.Error
```

Exception

The class Exception and its subclasses are a form of Throwable that indicates conditions that a reasonable application might want to catch.

```
java.lang.Object
  java.lang.Throwable
    java.lang.Exception
```

RuntimeException

RuntimeException is the superclass of those exceptions that can be thrown during the normal operation of the Java Virtual Machine.

A method is not required to declare in its throws clause any subclasses of RuntimeException that might be thrown during the execution of the method but not caught.

```
java.lang.Object
  java.lang.Throwable
    java.lang.Exception
      java.lang.RuntimeException
```

[Prev](#)

Develop code that makes use of exceptions and exception handling clauses (try, catch, finally), and declares methods and overriding methods that throw exceptions.

[Home](#)

[Next](#)

Recognize situations that will result in any of the following being thrown:
ArrayIndexOutOfBoundsException,
ClassCastException, IllegalArgumentException,
IllegalStateException, NullPointerException,
NumberFormatException, AssertionError,
ExceptionInInitializerError, StackOverflowError or
NoClassDefFoundError. Understand which of these are thrown by the virtual machine and recognize situations in which others should be thrown programmatically.
