

jdbc:borland:dslocal

Borland®

JDBC
sql cmp
datastore.setlocale(newJava.util.Locale("ja","JP",""))

Borland® JDataStore™ features

Platform independence

- Provides a platform-independent, highly scalable object relational database, written entirely in Java™
- Supports single jar files that run on Java™ virtual machines (JVM™) 1.1, 1.2, and 1.3
- Supports small device platforms, including Symbian™ Epoc™ and Windows® CE
- Delivers a portable storage system

High-performance scalable database engine

- Optimized for high transaction throughput
- Built for intelligent query optimization strategies
- Designed to allow read-only transactions to operate at full speed without needing to acquire locks
- New** Features row-level locking for increased concurrency
- Includes separate local JDBC® driver for high-speed in-process access
- Offers JDBC connection pooling with statement caching
- Provides high-speed crash recovery from system failures

Adherence to industry standards

- Industry-standard support with SQL entry-level 92 (large subset)
- Compliance with J2EE™ platform CTS 1.3 (large subset)
- Unicode® for Java and collation key support for sorting and indexing
- Inclusion of JDBC 1.2 and partial JDBC 2.0 and JDBC 3.0 JTA (Java™ Transaction API) distributed transactions (XA protocol)
- ODBC via Easysoft ODBC to JDBC gateway
- Access to JDataStore™ from DataExpress™

JDataStore visual tools

- Allows you to view and edit data
- Lets you administer transaction support, security, backups
- Supports import and export from other JDBC databases for interoperability
- Create/restructure tables and indexes for better flexibility
- Execution of SQL

JDataStore™

information

▶ Borland® JDataStore™ features

Development

Integrated with Borland® JBuilder,™ the leading Java development solution, and Borland® Enterprise Server, the leading enterprise platform for Web, CORBA,® and J2EE deployment, for quicker development and deployment of applications

Accessible from Borland Delphi™ and C++Builder™ development environments using Easysoft ODBC to JDBC gateway

Unidirectional data replication for supporting a disconnected briefcase development model

Security features for user authentication and database encryption

Java triggers

Rich data type support for Java primitives, objects, SQL, and Blobs

"Pluggable" storage for DataExpress data-access components

Direct binding of tables and columns to visual swing JavaBeans® controls

New Auto increment fields

New All four JDBC transaction isolation levels

Deployment

Use a single jar file that can be used to deploy applications across all platforms

Take advantage of the portable file format; use database file and log files on any platform

Use read-only transactions for online backup for continuous database availability

Monitor and log database activity with JDataStore Visual Server
