

ITU-T

Empowering global ICT development

Malcolm Johnson
Director, TSB, ITU

ITU-T Objectives

- Develop and publish standards for global ICT interoperability
- Identify areas for future standardization
- Provide an attractive and effective forum for the development of international standards
- Promote the value of ITU standards
- Disseminate information and know-how
- Cooperate and collaborate
- Provide support and assistance

ITU-T Key Features

- Truly global public/private partnership
- 95% of work is done by private sector
- Continuously adapting to market needs
- Pre-eminent global ICT standards body

ITU-T Recommendations connect the world...

Without ITU-T standards you
couldn't make a telephone call
from one side of the world to
another.

Without ITU-T standards the
Internet wouldn't function.

ITU Mark

- Resolution 76
- ITU created for interoperability
- Conformity assessment important in the context of WTO standardization commitments
- Gives increased confidence in ICT
- Assistance to developing countries
- Experts group has been established

Industry Advisory Group:

- Resolution 68 and GSS proposal:
 - High-level industry executives
 - Identify and coordinate priorities and subjects to minimize number of forums/consortia
 - Consult first with developing countries
 - Report to next WTSA

Draft Implementation of IAG

- Composition: CTOs or equivalent from a representative sample of ITU-T Sector Members
- No substitutes would be allowed
- Each CTO may have one advisor
- Meetings held at convenient locations
- remote participation allowed
- one day meeting once a year, dinner on the evening before;
- Meeting configuration will be boardroom-style

Implementation of IAG (2)

- TSB would provide the secretariat
- discussion documents coordinated and developed by the advisors
- Agenda items may be proposed by the Director or by any member
- Each meeting would review actions taken on decisions of previous meetings.
- Communiqués would be made public, but not reports of meetings

Technical Highlights

ITU-T's work spans all layers

ITU-T provides Broadband Access

- Copper:
 - Hundreds of millions use ITU-T's DSL
 - Up to 200Mbit/s aggregate with VDSL 2
- Cable:
 - IPCablecom
- Optical access:
 - ITU-T's GPON allows up to 2.5Gbit/s
 - New types of optical fibre for access networks

GPON interoperability pavilion
Nxtcomm, Chicago, 2007

ITU-T puts the Super in Information *Super* Highway

- Optical transport now to 100 Gbit/s
- Carrier class Ethernet
- Carrier class MPLS (MPLS-TP)
- Evolution towards an All Optical Networks (AON)

FTTx and NGN rollout

- New standards will address need for new faster, cost effective and safer cable installation techniques
- Reduction of excavation, the problem for traffic, and the generation of noise.

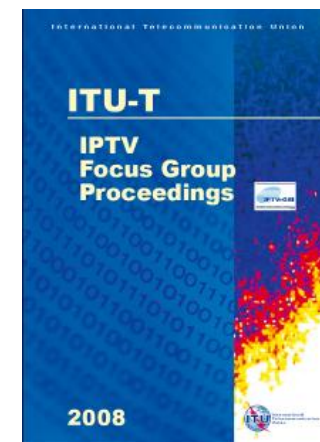

Next Generation Networks

- Telecoms revolution:
From circuits to packets

- Managed and secured
- With Quality of Service
- Saving money for customers and service providers
- IPTV standards well advanced

The network knocks at your door

- Home Networking to achieve interoperability on a global scale
 - Converged architecture and services
 - Next generation set-top box
 - PC World (US) 13.12.08: “The powerful world standards organization ...[ITU].. has reached agreement on G.hn a set of specifications that would encompass phone lines, power lines, and coaxial cable to provide HDTV room to room...”

New multimedia system

- Work in progress
- Major improvement over SIP and H.323
- Communication across any kind of application from any kind of device
- H.325 separates the application logic and intelligence from the user's control device / identity

ITU-T's quantum leaps in speech, audio and video quality

- Emmy award received on behalf of ISO, IEC & ITU
- Call for technical contributions for H.265
- Extension of work on speech coding to wideband

Intelligent Transport Systems: new work, new members

- New work:
 - Wideband communication in cars
 - Vehicle gateway protocol

- ITU, ISO and IEC and Geneva Motor Show
 - Annual Event

Safety in the cyber world

- Identity management
- Security standards for:
 - NGN,
 - IPTV,
 - Home networks,
 - Ubiquitous sensor networks
 - Mobiles
- Traceback
- Countering spam

ICTs and Climate Change

UN Secretary-General,
Ban Ki-moon: "ITU is one of the
very important stakeholders in the
area of climate change."

- Checklist to ensure new standards take climate change into account
- Methodology to describe and estimate present and future user [energy] consumption of ICTs over their entire life-cycle

Participants in
Focus Group ICT
and Climate
Change

Emergency Communications

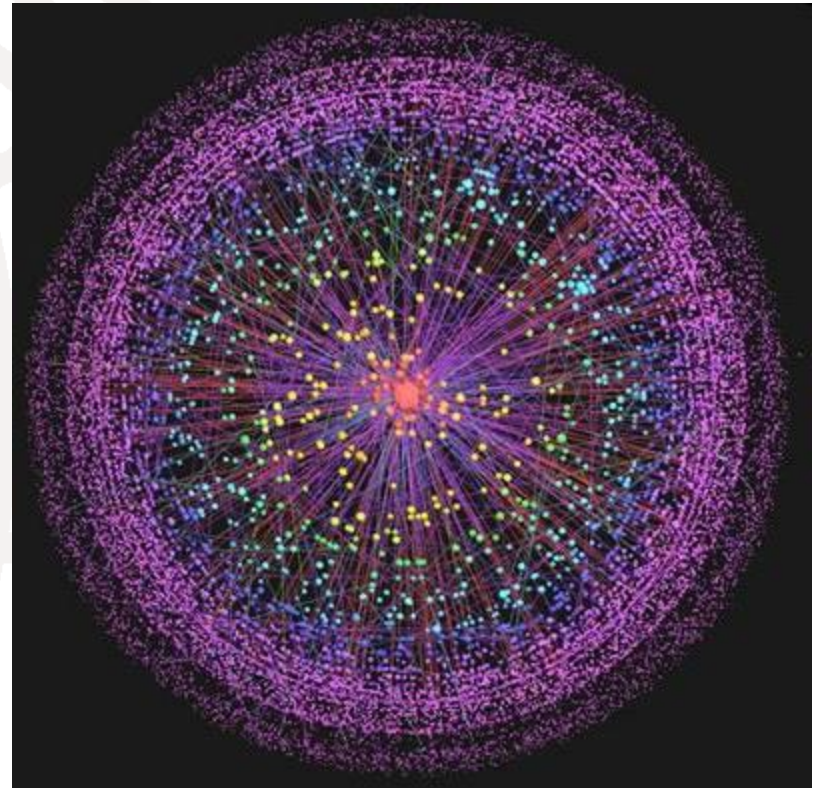

- Common Alerting Protocol (CAP)
 - A consistent method of delivery for warning messages
- Call priority schemes
 - Giving priority in disaster zones to emergency calls
- In Case of Emergency numbers

ITU has deployed satellite terminals to help restore communications in the aftermath of disasters around the world

Future networks

- Focus Group
- Collect and identify visions of future networks
- First meeting 6-10 July Geneva

Outreach and attracting new work

Workshops: New work, new blood, new friends

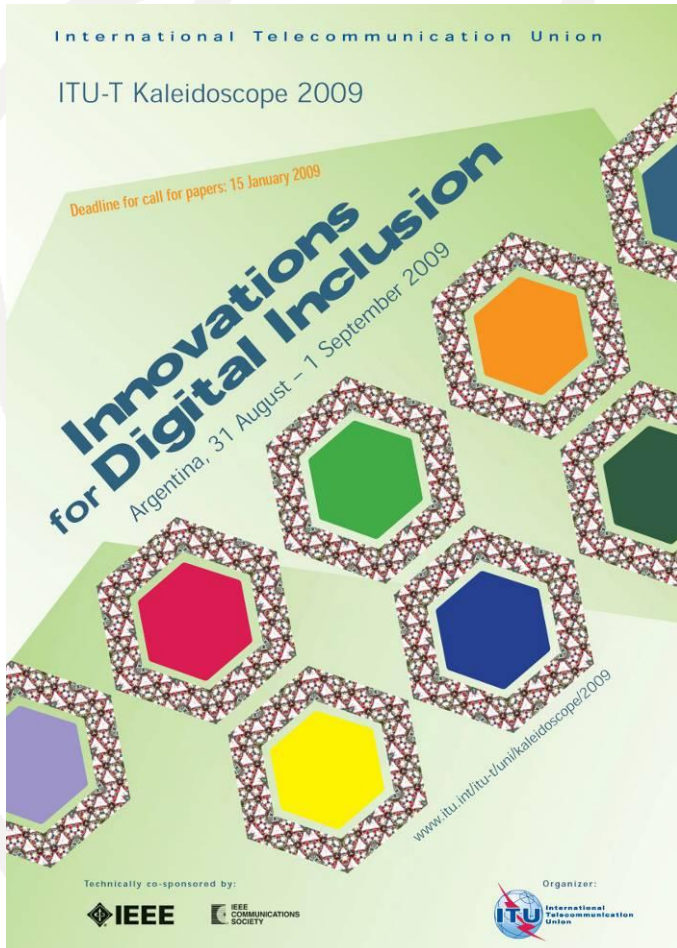

- Outreach to non ITU audience
- Can result in new work
 - eg Identity Management
- Partnerships: IETF, IEEE, OASIS, Grid Forum, ISO, IEC
- 2005-8 of 78 workshops
18 in PASC area.
- Remote participation now possible
- Future more workshops
North America and Europe

Technology Watch: Scouting for future technologies ...

- Recent papers:
 - Remote collaboration tools
 - Ubiquitous Sensor Networks
 - ICTs and Climate Change
 - Telepresence
 - High-performance video-conferencing
 - Intelligent Transport Systems
 - Lawful interception (LI)
 - Next-Generation Networks (NGNs) and energy efficiency
- Upcoming: ICTs and food security, network robotics, telebiometrics

...and future engineers

- 1st Kaleidoscope event 2008:
 - 140 contributions from academic institutions from around the world
- 2nd Kaleidoscope event:
 - Innovations for Digital Inclusion
 - September 2009, Mar del Plata, Argentina
- Best papers proposed as new work
- Published by IEEE
- Sponsorship opportunities

ITU-T seeks collaboration

The Internet Corporation for Assigned Names and Numbers

- 44 formal partnerships
- World Standards Cooperation
 - patent policy
 - joint events
- ITU-T and IEEE
 - MoU
 - Joint events
- Global Standards Collaboration
 - Endorsement of ITU climate change activity
- ITU-T and 3GPP
 - Clarification of process
- ITU-T and IETF
 - Management meetings
- ITU-T and ICANN
 - Board presence

European outreach

- Participation in:
 - ETSI General Assembly
 - EC ICT standardisation policy Steering Committee
 - EC IPR Group
- EC appointed liaison officer

ITU-T uses traditional communications tools ...

- New design
- Translated pages
- New pages for those new to ITU-T

... upped use of web 2.0 technologies ...

ITU-T and Wikipedia. Many entries updated

Newsfeeds picked up in media all around the world

ITU YouTube channel

... and feeds the press

Press Lunch, London
June 2008 –
Journalists from:

Led directly to BBC world
service interview
(and other coverage)

More meet the press events planned for 2009

ITU Telecom World

- Exhibition: 700 Exhibitors; 50,000 visitors
- Ministerial Roundtable: High level dialogue with industry leaders
- VIP Programme: Brings together decision-makers for deal making
- CTO roundtable
- Online Networking: Connect with clients for onsite meetings
- Media: 1,500 journalists; 450 organizations

Figures based on Telecom World 2006

GSS and WTSA-08

First Global Standards Symposium

- 20 October 2008: 500 participants
- Aggressive action needed to streamline standards work
- Chaired by H.E. Mr Nguyen Thanh Hung, Vice-Minister, Ministry of Information and Communications, Viet Nam
- Speakers included:
 - Alan Bryden, SecGen, ISO and Enno Liess, VP, IEC
 - Ministers, ambassadors, heads of regulatory authorities, senior executives from the private sector
- Conclusions addressed:
 - Bridging the standardization gap;
 - Challenges in the new standards landscape, including climate change and accessibility;
 - Strengthen collaboration among standards bodies.
- Conclusions acted on by WTSA-08

WTSA-08

- 1st time chaired by a woman
 - Lyndall Shope-Mafole, Director-General, South African Ministry of Comms
- 1st time in Africa
- 1st time preceded by Global Standards Symposium
- 1st time academia invited
- 1st time side events held: accessibility; climate change; and cybersecurity
- 1st time associated exhibition of new technologies
- 1st substantial restructuring of the Sector
- 1st time term limits on chairmanships applied:
 - Virtually complete new team of chairmen and vice-chairmen including 22 from developing countries
- Unprecedented media coverage
 - Local and international: including 3 TV interviews, 3 radio interviews, and numerous printed articles and web coverage

WTSA-08

Conclusions

- Strengthened Role as pre-eminent global ICT standards body.
- Bridging the standardization gap essential to Connect the World.
- Streamlined and efficient structure
 - Avoiding duplication and focusing on key objectives
- Excellent team of new chairmen and vice-chairmen from 33 countries
- Key Resolutions on:
 - Human exposure to electromagnetic fields
 - Encouraging the deployment of IPv6
 - Computer Incident Response Teams
 - ICTs and climate change,
 - Accessibility to ICTs for persons with disabilities,
 - Conformance and interoperability testing, a possible future ITU Mark
 - Encouraging academic participation
 - Sector members from developing countries
 - Nomadic telecommunication services and applications

The only intergovernmental global standardization body

Participation in the ITU standards process gives you direct influence over the technological forces that are shaping the ICT industry.

Manufacturers gain access to global markets and enjoy economies of scale in production and distribution.

Users benefit from the assurance that equipment will integrate and work seamlessly with other systems.
