

iOS6 Development for Beginners

Lab Exercise 4

1) Create a new application with the following settings for iOS 6:

2) Move to the storyboard and replace the existing view controller with a Table View Controller and using the New > File command creating a new Table View Controller class file. Using the technique demonstrated in the video lecture, associate your class file with the Table View Controller pictured on the storyboard.

3) Next, create a UITableViewCell and connect your prototype cell to it.

4) Inside the prototype cell create a large text label, a small textlabel and a small image. The large label will be used to display a dog name, the small label a nickname, and the image will display an image associated with that dog.

5) Using the images.zip file provided, place the images in the supporting files folder in the application. (Be sure to unzip them first!)

6) Using the techniques and skills demonstrated in the video lecture create three NSArray objects. The first array will include the dog names, the second array will include the nicknames, and the third the image names. Your arrays should be populated as indicated below:

Breed	Nickname	Image
Yorkshire Terrier	Yorkie	Yorkshire.jpg

- 
- * Single View Application
 - * Product Name: DogTableApplication
 - * Organization Name: As You Desire
 - * Company Identifier: As Appropriate
 - * Devices: iPhone
 - * Use Storyboard: Checked
 - * Use Automatic Reference Counting: Checked

Siberian Husky	Chukcha	SiberianHusky.jpg
Doberman Pinscher	Dobie	Doberman.jpg
Dachshund	Wiener Dog	Dachshund.jpg
Labrador Retriever	Lab	Labrador.jpg

7) Using the techniques and skills demonstrated in the video lecture, create a list view that is populated by the arrays with each cell displaying the dog name, nickname, and image from the appropriate index in the array.
