

iOS6 Development for Beginners

Lab Exercise 8

1) Follow the steps demonstrated in the video lecture to set up a new iOS 6 application in Xcode 4. When prompted, use the following settings:

2) Download the spaceship.png graphic associated with this lab exercise and place it in your Support Files folder for this exercise. Place an Image View directly in the center of the screen and place the spaceship.png image in the Image View. Make sure the image is being kept at its original 128px by 128 px size. Your View Controller should look like this:

- * Single View Application
- * Product Name: Spaceship
- * Organization Name: As You Desire
- * Company Identifier: As Appropriate
- * Devices: iPhone
- * Use Storyboard: Checked
- * Use Automatic Reference Counting: Checked

3) Create the necessary code to move the spaceship as the user touches the view controller. If the user touches the left side of the screen, set the images center more to the left of its starting position. If they touch the top, move the image toward the top. You may want to figure out X and Y ranges to move the spaceship to the top and left, or bottom and right simultaneously.

4) Test and debug if necessary.

5) Add the following features, testing and debugging as required:

- a) Add a touchesMoved event to allow the user to drag the image anywhere.
- b) Add a gesture and gesture detector to your storyboard. If the user makes the gesture, move the spaceship back to its original starting point.
